HW3 Evaluation

Zhenchuan Pang (zp55)

Difficulties:

I have difficulty in coding the both client side and server side of ajax, finding and using the Spotify API.

Solve:

As for ajax part, I reviewed the class lecture and section material. For using Spotify, I solve this problem by asking questions on piazza and test, I console.log lots of information to debug, and find the url I want and apply that in the next stage, then finished that part.

Learn from the assignment:

To be honest, I have a much better understanding about ajax than before, also, I learned how to use google map api and Spotify, maybe the next time I got a new api, I would able to figure it out and use it quickly.
